

CS/B.Tech (ECE-NEW)/SEM-7/EC-703A/2013-14

2013

RF & MICROWAVE ENGINEERING

Allotted : 3 Hours

Full Marks : 70

The figures in the margin indicate full marks.

Candidates are required to give their answers in their own words as far as practicable.

GROUP - A

(Multiple Choice Type Questions)

Choose the correct alternatives for any ten of the following : $10 \times 1 = 10$

- i) The main advantage of microwave is that it
 - a) is highly directive
 - b) moves at the speed of light
 - c) has greater S/N ratio
 - d) has higher penetration power.
- ii) Klystron operates on the principle of
 - a) amplitude modulation
 - b) frequency modulation
 - c) pulse modulation
 - d) velocity modulation.

CS/B.Tech (ECE-NEW)/SEM-7/EC-703A/2013-14

- iii) In a waveguide the dominant mode is
- lowest cut-off frequency
 - lowest cut-off wavelength
 - highest cut-off frequency
 - none of these.
- iv) A TRAPATT diode is preferred to an IMPATT diode because of
- its higher efficiency
 - its lower noise
 - lesser sensitivity of harmonics
 - its larger bandwidth.
- v) The Tunnel diode
- has a tiny hole through its centre to facilitate tunnelling
 - is a point contact diode with very high reverse resistance
 - uses a high level of doping to provide a narrow junction
 - works by quantum tunnelling exhibited by gallium arsenide.

CS/B.Tech (ECE-NEW)/SEM-7/EC-703A/2013-14

- A microstrip is analogous to a
- co-axial line
 - parallel wire line
 - rectangular waveguide
 - circular waveguide.
- vi) If VSWR is infinite, the transmission line is terminated in
- short circuit
 - complex impedance
 - open circuit
 - either (a) or (c).
- vii) The main advantage of using microwaves for communications is
- large bandwidth
 - small bandwidth
 - low power
 - high power.
- viii) The range of X-band is
- 12-20 GHz
 - 20-27 GHz
 - 1-2 GHz
 - 8-12 GHz.
- x) An H-plane Tee is
- two-port network
 - one-port network
 - three-port network
 - four-port network.

xi) Large microwave power can be measured by

- a) Calorimeter wattmeter
- b) Bolometer
- c) Wattmeter
- d) Wavemeter.

xii) In a rectangular waveguide dominant mode is

- a) TM_{11}
- b) TE_{11}
- c) TE_{10}
- d) TE_{01}

xiii) PIN diode is

- a) a microwave isolator
- b) a microwave amplifier
- c) a microwave filter
- d) a microwave switch.

GROUP - B

(Short Answer Type Questions)

Answer any three of the following. $3 \times 5 = 15$

2. Define microwave. What is the significance of using 'S' parameter in microwave engineering? $2 + 3$
3. What are the differences between TED's and junction devices? Distinguish between 'Group Velocity' and 'Phase Velocity'. $3 + 2$

Describe the operating principle of a four-port microwave circulator. $1 + 4$

What do you mean by cut-off frequency of a waveguide?

What is the power in the auxiliary arm for a 3 dB coupler with input power of 167 mW. The input of the coupler termination results in a VSWR of 2. $1 + 4$

State the advantages and disadvantages of waveguides compared to coaxial lines.

Can a circulator be used as an isolator? If so, how?

GROUP - C

(Long Answer Type Questions)

Answer any three of the following. $3 \times 15 = 45$

- a) Does TEM exist in rectangular waveguide? Why?
- b) Which is the dominant mode in rectangular waveguide? Why?
- c) A hollow rectangular waveguide operates at $f = 1$ GHz and it has dimension $5 \text{ cm} \times 2 \text{ cm}$. Check whether TE_{21} mode propagates or not. $5 + 5 + 5$

CS/B.Tech (ECE-NEW)/SEM-7/EC-703A/2013-14

9. a) Explain Read diode. Give the electric field distribution, doping profile, voltage and current characteristics of read diode.
- b) What is IMPATT diode ? How does the negative resistance arise in this diode ?
- c) Explain PIN diode and give its application. 6 + 5 + 4
10. a) Explain the tunnelling action in a tunnel diode.
- b) With the help of two-valley, explain how negative resistance can be created in Gunn diode. Mention its applications. 5 + 10
11. a) Derive the equation for the scattering matrix of magic Tee.
- b) Differentiate between circulators and isolators. 7 + 8

CS/B.Tech (ECE-NEW)/SEM-7/EC-703A/2013-14

Describe how the frequency of a given microwave source can be measured.

Explain how low VSWR can be measured using a microwave bench. 7 + 8
