DATA STRUCTURE & ALGORITHMS

Time Allotted: 3 Hours Full Marks: 70

The figures in the margin indicate full marks.

Candidates are required to give their answers in their own words as far as practicable.

GROUP - A

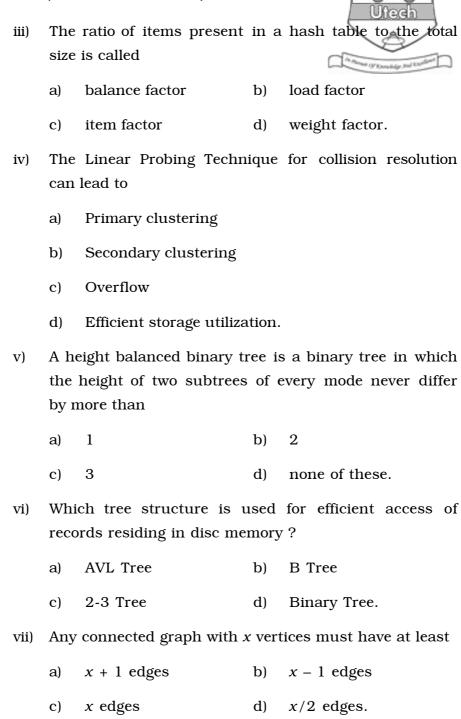

(Multiple Choice Type Questions)

 $1. \quad \hbox{Choose the correct alternatives for any $\it ten$ of the following:}$

 $10 \times 1 = 10$

- i) The time complexity of binary search is
 - a) $0 (n^2)$
- b) 0 (n)
- c) $0 (\log n)$
- d) $0 (n \log n)$.
- ii) The fastest sorting algorithm for an almost already sorted array is
 - a) quick sort
 - b) merge sort
 - c) selection sort
 - d) insertion sort.

33101 [Turn over

- viii) Which of the following is essential for converting ar infix expression to postfix notation?
 - a) A parse tree
 - b) An operand stack
 - c) An operator stack
 - d) None of these.
- ix) The values in a BST can be sorted in ascending order by using which of the following traversals?
 - a) Pre-order
- b) In-order
- c) Post-order
- d) Level-order.
- x) The prefix expression for the infix expression

$$a * (b + c) / e - f$$
 is

a)
$$/*a+bc-ef$$

b)
$$-/* + abcef$$

c)
$$-/*a+bcef$$

- d) None of these.
- xi) In C language, malloc() returns
 - a) integer pointer
 - b) structure pointer
 - c) null pointer
 - d) void pointer.

- a) Linear Recursion
- b) Binary Recursion
- c) Non-linear Recursion
- d) Mutual Recursion.
- xiii) A linear list in which elements can be added or removed at either end but not in the middle is known as
 - a) Stack

- b) Queue
- c) Dequeue
- d) Heap.

GROUP - B

(Short Answer Type Questions)

Answer any *three* from the following. $3 \times 5 = 15$

2. Prove that

$$O(f(x)) + O(g(x)) = O(max(f(x), g(x)).$$

3. a) Convert the following infix expression into equivalent postfix expression using stack :

$$(A + B) * C - (D - E)) / (F + G).$$

b) What is a Max Heap?

- 4 + 1
- 4. What is a priority queue ? Mention the different design options for priority queue. 2 + 3
- 5. "Binary search technique cannot be implemented using Linked list." Justify the validity of the statement.
- 6. Show how the following integers can be inserted in an empty binary search tree in the order they are given:

Draw the tree in each step.

GROUP - C

(Long Answer Type Questions)

Answer any three of the following.

 $3 \times 15 = 45$

7. a) Prove that, the height of a binary tree that contains nelements, $n \ge 0$, is at most n and at least

 $[\log (n+1)].$

b) The order of nodes of a binary tree in Preorder and in order traversal are as under:

In order: DBFEGHIAC

Pre-order: ABDEFGHIC

Draw the corresponding binary tree.

- How does static allocation differ from dynamic allocation c) 5 + 5 + 5of memory?
- 8. a) What is a Stack ADT?
 - Write a C function for popping an element from a stack b) implemented using linked list.
 - Explain three uses of stack data structure. 5 + 5 + 5c)
- 9. Explain with a suitable example the principle of a) operation of QuickSort algorithm.
 - In which cases, QuickSort becomes a 'SlowSort'? What b) is the remedy in those cases?
 - c) Compare the performance and operation of BubbleSort and SelectionSort. 5 + 5 + 5

- 10. a) Show the steps in creation of a height balanced binary AVL TREE using insertion of items in the following order show the balanceing steps required.
 - (March, May, November, August, April, January, December, July, February, June, October, September)
 - b) What do you mean by a *B*-Tree and what are the uses of such a tree in data structures?
 - c) Consider a *B*-Tree of order 5 as shown below insert the elements 4, 5, 58, 6 in this order in the *B*-Tree.

dia

- 11. a) Compare BFS and DFS. Discuss the two different ways of representing a graph.
 - b) Draw the minimum cost spanning tree for the graph given below and also find its cost.

dia

c) What is a complete graph? Show that the sum of degree of all the vertices in a graph is always even.

5 + 5 + 5
